SRI KARTHIK PAMPANA

DevOps Engineer | AWS

srikarthikpampana@gmail.com | linkedin.com/in/srikarthikpampana

PROFESSIONAL SUMMARY

- DevOps Engineer with hands-on experience deploying and operating AWS infrastructure through Infrastructure as Code, CI/CD automation, and container-based services.
- Strong background designing AWS CDK stacks for ECS-based services, scoped IAM roles, and networking across multiple production applications.
- End-to-end experience building and maintaining GitHub Actions CI/CD pipelines, including OIDC-based AWS authentication in place of long-lived credentials.
- Hands-on experience building an AI-assisted vulnerability remediation platform that scans, patches, and raises pull requests for container and application security findings, integrated with CI pipelines.
- Background in cloud security, digital forensics, and DevSecOps practices, with a security-first approach to infrastructure and deployment design.

TECHNICAL SKILLS

Cloud & Infrastructure: AWS, AWS CDK, GCP, Azure

DevOps & CI/CD: GitHub Actions, Docker, CI/CD Pipeline Design, OIDC Authentication

Security: Container Scanning, Vulnerability Remediation, AppSec, Secrets Management, Secure SDLC, Digital Forensics

AI / Automation: AWS Bedrock AgentCore, Strands, Agentic Remediation Workflows, SageMaker, MLflow

Languages: Python, Bash, C, SQL

Forensics & Security Tools: Autopsy, FTK, Wireshark, Burp Suite, Nmap, Metasploit

Operating Systems: Kali Linux, Parrot OS, Ubuntu, Ubuntu Server, Windows 10/11

EXPERIENCE

A3 Transforms

DevOps Engineer | October 2025 – Present

- Build and maintain GitHub Actions CI/CD pipelines end-to-end, using OIDC-based AWS role assumption instead of long-lived credentials.
- Design and deploy AWS infrastructure with CDK across multiple applications, using a repeatable base-resources-plus-service-stack pattern for ECS-based services with scoped IAM roles.
- Provision and maintain MLOps infrastructure (SageMaker Studio, VPC with private links, MLflow tracking server) and a multi-stage training pipeline that trains, registers, configures, deploys, and tests models across environments.
- Work on an AI vulnerability remediation platform pairing a Next.js console with an agentic remediation engine on AWS Bedrock AgentCore; runs can be triggered from CI pipelines or on demand, with fixes raised as pull requests.
- Contribute to a multi-agent orchestration platform built on Strands and deployed to Bedrock AgentCore, containerized via ECR and deployed through GitHub Actions with OIDC federation.
- Deploy and operate applications across a range of AWS services, managing environment-specific configuration and debugging deployment issues to keep releases unblocked.

CSG Lab – IIITH

Deep Learning Intern | July 2024 – December 2024

- Designed and applied deep learning models on a real-time project using Raspberry Pi, APIs, and VPS servers.
- Optimized models for efficiency and performance, bridging theory with practical deployment.
- Contributed to a smart-city-focused system aimed at improving route planning and traffic control.

Cyber Rakshak Org

Digital Forensics Intern | May 2024 – July 2024

- Performed digital forensics investigations, including data recovery, log analysis, and evidence preservation.
- Worked with forensic tools including Autopsy, FTK, Burp Suite, and Wireshark for case analysis.

- Assisted in incident response by preparing detailed forensic reports and documentation.

PROJECTS

DeepNet Guardian | *Deep Learning, Python, CI/CD*

- Built a real-time network intrusion detection system using custom-trained LSTM-based models to detect port scanning, DoS/DDoS, and web-based attacks.
- Used Scapy for live packet capture and multithreading for parallel execution, with a GitHub Actions CI/CD pipeline to automate model deployment and updates.
- Deployed the framework on cloud environments with monitoring and logging, ensuring scalability, reliability, and continuous availability.

Website Deployment on GCP | *Ubuntu, GCP, Cloud DNS*

- Deployed a fully functional CTFd website on a Google Cloud Platform VM running Ubuntu.
- Configured Cloud DNS for domain mapping and SSL, enabling secure, scalable, high-availability hosting.

EDUCATION

B.Tech, Computer Science with Cyber Security — 2025
Kakinada Institute of Engineering and Technology, Andhra Pradesh, India

CERTIFICATIONS

Google Cyber Security Professional Certificate — Google
Networking Basics — Cisco Networking Academy
Getting Started with Cloud — Juniper Networks
Crash Course for Python — Google
